

## POST COLLAR ASSEMBLY SPECIFICATION AND DATA SHEET

Standard 3" (76mm) Post Collar Assembly  
Part No. 231105-250  
Standard 3.5" (89mm) Post Collar Assembly  
Part No. 231105-260

---

The standard 3" Post Collar is manufactured entirely from 3mm thick Zintec. We also have an 89 mm (3½") version as standard but other size bores can be manufactured on request.

Assembly to the lighting pole is by using the clamping arrangement and requires the fitting of 4 nut & screw sets.

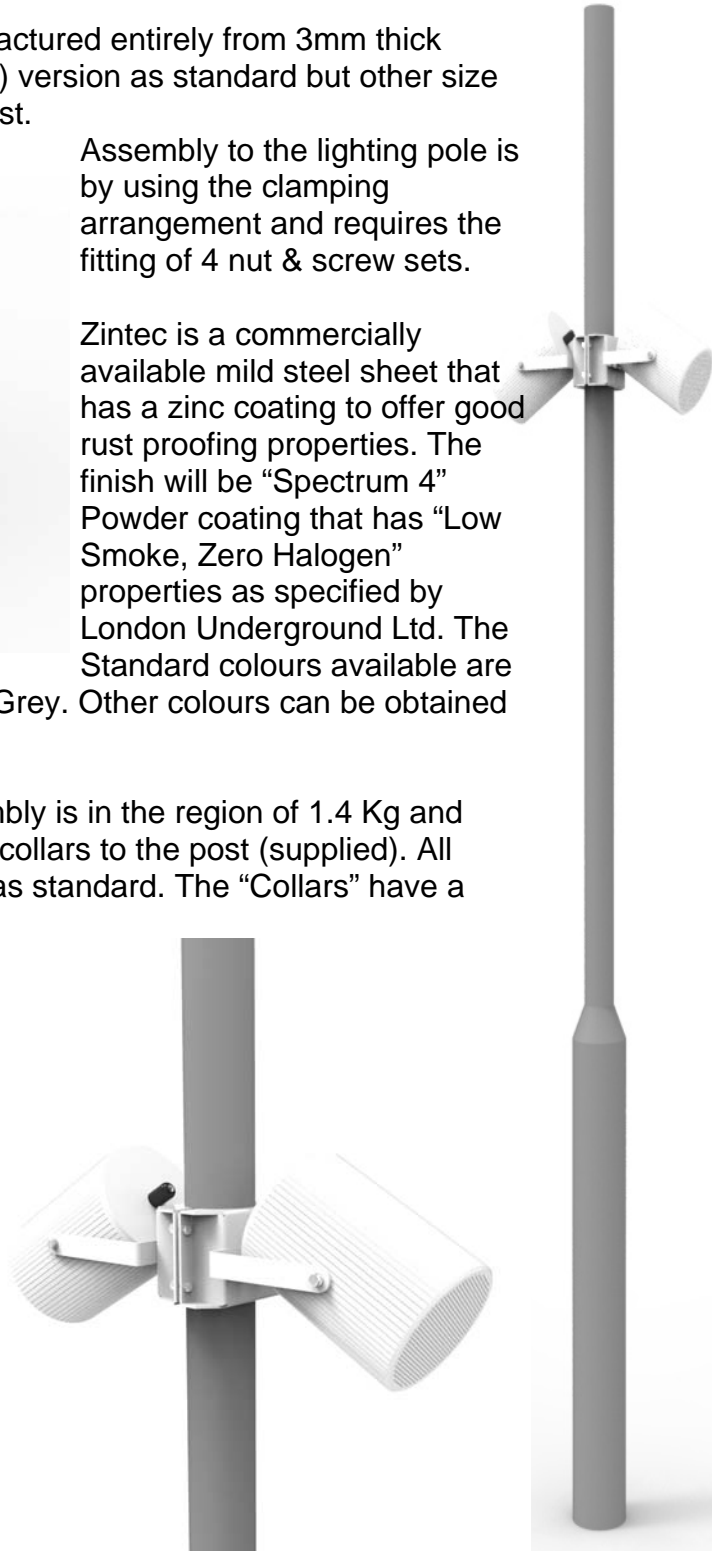

Zintec is a commercially available mild steel sheet that has a zinc coating to offer good rust proofing properties. The finish will be "Spectrum 4" Powder coating that has "Low Smoke, Zero Halogen" properties as specified by London Underground Ltd. The Standard colours available are

either Traffic White RAL9016 or Mid Grey. Other colours can be obtained on request.

The total weight of the bracket assembly is in the region of 1.4 Kg and requires four M6 fixings to clamp the collars to the post (supplied). All fixings will be BZP high tensile steel as standard. The "Collars" have a small amount of welding on each corner to prevent the sheet from spreading when the assembly is clamped under pressure.

The assembly has three M6 bushed fittings on both sides to fit the Projection Speaker fixing positions.

The bracket, in its current configuration, is capable of holding two speakers. Please check that the speaker fixing positions are the correct pitch for your chosen speaker model.
